

DEFENSIVE GBP MODEL PORTFOLIO

QUARTERLY FACTSHEET

31st MARCH 2025

OBJECTIVE

This model comprises a wide range of diversified active investment vehicles focused on delivering natural income as well as underlying capital appreciation. Investments within this range include unit trusts, mutual funds and exchange traded funds (ETFs), whose managers aim to outperform their respective markets. Asset classes you could find in this portfolio are equities, government bonds, corporate bonds, alternatives, commodities and cash. Absolute returns, multi-asset and property may all feature within the alternatives classification.

The portfolio seeks to generate modest returns higher than cash in the bank over the short to medium term (3-5 years or more) with potential for consistent though constrained capital growth. Portfolios will typically comprise 10% equity and 90% non-equity, though weightings may deviate within set parameters, allowing managers to react to market conditions.

TAM RISK RATING: **LOW**
