

OBJECTIVE

This model comprises a wide range of diversified active investment vehicles including unit trusts and mutual funds, whose managers aim to outperform their respective markets. Asset classes you could find in this portfolio are equities, government bonds, corporate bonds, alternatives, commodities and cash. Absolute return, multi-asset and property may all feature within the alternative's classification.

The portfolio seeks to generate capital growth over the medium term (5 years or more), with the aim of riding out short-term fluctuations in value. The portfolio will have a more balanced approach to equity exposure compared to Active Growth - typically comprising 50% equity and 50% non-equity - though weightings may deviate within set parameters, allowing managers to react to market conditions.
